CONSIDER EARLIER ESCALATION OF PATIENTS WITH

- Chronic or complex conditions
- Disability
- Post-operative
- Opioid infusions

ADDITIONAL CRITERIA FOR ESCALATION ON BACK PAGE

ASSESSMENT OF RESPIRATORY DISTRESS			
Respiratory distress is based on the most significant feature (Severe - Moderate - Mild)			
	MILD	MODERATE	SEVERE
Airway	• Stridor on exertion	• Stridor at rest	• New onset of stridor • Absent breath sounds (silent chest)
Behaviour & posture	• Normal • Can walk or crawl	• Irritability • Lethargic • Tripod sitting	• Agitated / confused / drowsy • Collapsed or exhausted
Speaking & feeding	• Normal • Talks in sentences	• Difficulty talking / vocalising or crying • Difficulty feeding or eating	• Unable to talk / vocalise or cry • Unable to feed or eat
Respiratory rate	• Respiratory rate in the Blue Zone	• Respiratory rate in the Yellow Zone	• Respiratory rate in the Red Zone • Decreasing respiratory rate (exhaustion)
Respiratory effort	• None / minimal	• Moderate recession • Tracheal tug • Nasal flaring • Head bob	• Severe recession • Seesaw / abdominal breathing • Gasping • Grunting
Apnoeic episodes	• None	• Irregular breathing pattern	• Apnoeic episodes
Oxygen	• No oxygen requirement	• Commencement of oxygen • Increasing oxygen requirement	• Hypoxaemia, may not be corrected by oxygen • Extreme pallor • Cyanosis

PRESCRIBED FREQUENCY OF OBSERVATIONS						
Observations must be performed routinely at least 4th hourly, unless advised below						
DATE:		dd/MM/yy				
TIME:		hh:mm				
Frequency Required		Twice daily				
Medical Officer Name (BLOCK letters)		P. SMITH				
Medical Officer Signature		P. SMITH				
Attending Medical Officer Signature		R. Bloggs				
ALTERATIONS TO CALLING CRITERIA (ACC)						
Acute ACC changes can be set for up to 12 hours. Chronic ACC changes apply for the episode of care Any alterations MUST be signed by a Medical Officer and confirmed by the Attending Medical Officer Document rationale for altering CALLING CRITERIA in the patient's health care record						
DATE:		dd/MM/yy				
TIME:		hh:mm				
Next review due Date & Time		dd/MM/yy hh:mm				
ACUTE/CHRONIC:		ACUTE				
Vital Sign	Zone	Standard Thresholds				
Respiratory Rate	Yellow Zone	5 - 10 30 - 40				
	Red Zone	<5 >40				
SpO ₂	Yellow Zone	90 - 95				
	Red Zone	<90				
Heart Rate	Yellow Zone	40 - 50 130 - 150	xxx-xxx			
	Red Zone	<40 >150	≤ or ≥ xxx			
Other	Yellow Zone

REFER TO YOUR LOCAL CLINICAL EMERGENCY RESPONSE SYSTEM (CERS) PROTOCOL FOR INSTRUCTIONS ON HOW TO MAKE A CALL TO ESCALATE CARE FOR YOUR PATIENT	
CHECK THE HEALTH CARE RECORD FOR AN END OF LIFE CARE PLAN WHICH MAY ALTER THE MANAGEMENT OF YOUR PATIENT	
Blue Zone Response IF YOUR PATIENT HAS ANY BLUE ZONE OBSERVATIONS YOU <u>MUST</u> 1. Initiate appropriate clinical care 2. Increase the frequency of observations, as indicated by your patient's condition 3. Manage anxiety, pain and review oxygenation in consultation with the NURSE IN CHARGE 4. You can make a call to escalate the care of your patient at any time if you are worried or unsure whether to call Consider the following: 1. What is usual for your patient and are there documented 'ALTERATIONS TO CALLING CRITERIA'? 2. Does the abnormal observation reflect deterioration in your patient? 3. Is there an adverse trend in observations?	
Yellow Zone Response IF YOUR PATIENT HAS ANY YELLOW ZONE OBSERVATIONS OR ADDITIONAL CRITERIA* YOU <u>MUST</u> 1. Initiate appropriate clinical care 2. Repeat and increase the frequency of observations, as indicated by your patient's condition 3. Consult promptly with the NURSE IN CHARGE to decide whether a CLINICAL REVIEW (or other CERS) call should be made Consider the following: • What is usual for your patient and are there documented 'ALTERATIONS TO CALLING CRITERIA'? • Does the trend in observations suggest deterioration? • Is there more than one Yellow Zone observation or additional criteria? • Are you concerned about your patient? IF A CLINICAL REVIEW IS CALLED: 1. Reassess your patient and escalate according to your local CERS if the call is not attended within 30 minutes or you are becoming more concerned 2. Document an A-G assessment, reason for escalation, treatment and outcome in your patient's health care record 3. Inform the Attending Medical Officer that a call was made as soon as it is practicable *Additional YELLOW ZONE Criteria • Increasing oxygen requirement • Poor peripheral circulation • Greater than expected fluid loss • Reduced urine output or anuria (< 1mL/kg/hr) • Altered mental state: Agitation, Combative or Inconsolable • New, increasing or uncontrolled pain • New onset of fever > 38.5°C • BGL 2-3mmol/L • Concern by you or any staff or family member	

| Red Zone Response **IF YOUR PATIENT HAS ANY RED ZONE OBSERVATIONS OR ADDITIONAL CRITERIA# YOU MUST CALL FOR A RAPID RESPONSE (as per local CERS) AND** 1. Initiate appropriate clinical care 2. Inform the **NURSE IN CHARGE** that you have called for a Rapid Response 3. Repeat and increase the frequency of observations, as indicated by your patient's condition 4. Document an A-G assessment, reason for escalation, treatment and outcome in your patient's health care record 5. Inform the Attending Medical Officer that a call was made as soon as it is practicable **#Additional RED ZONE Criteria** - **Cardiac or respiratory arrest** - **Circulatory collapse** - **Patient unresponsive** - **New onset of stridor** - Significant bleeding - Sudden decrease in Level of Consciousness (a drop of 2 or more points on the GCS) - New or prolonged seizure activity - BGL < 2mmol/L or symptomatic - **Serious concern by you or any staff or family member** - No change or signs of improvement within 1 hour of CERS - 3 or more simultaneous 'Yellow Zone' observations | |
